

Soft trampoline

Thank you very much for choosing this product!

Please read the instructions fully before you assemble the equipment so you can enjoy the product and safety is guaranteed. We are happy to respond to your questions and requests.

Includes:

(a) 1 soft tramp (folded up)

(b) 1 connection hose, transparent:

For inflating the soft trampoline, we recommend the air pump (c) illustrated (prod. code 11 110 0105).

This must be ordered separately.

Inflating the soft trampoline

1. Connect the air pump, black hose (attached to 'inflate' on the pump), adaptor 2 (the other adaptors are for inflating Sport-Thieme exercise balls and the like) and the transparent hose.
2. The inflation valve is on the soft trampoline's underside; remove the valve cover by turning it to the left.
3. In its default position the valve is closed and protrudes a little from the opening. To open the valve, push it into the holder and turn the valve 90 degrees clockwise, it will lock into place, leaving the air channel open.
4. Connect the air pump to the soft trampoline by inserting the transparent hose's free end into the valve opening (so that no air can escape around the sides) and fill the trampoline with air.
5. Remove the hose from the opening. Close the valve by turning it 90 degrees anti-clockwise; it will now protrude from the opening once more.
6. Screw the cover back on. The soft trampoline is now ready for use.

For **deflating** you can either:

- repeat steps 1–6; please ensure the black hose is attached to 'deflate' on the pump in step 1, or
- simply open the valve and press the air out; it is easiest to do this by folding up the sections that are already deflated.
